Summary

Senior Software Engineer focusing on building web apps with Rails, Next.js, React, Ruby, TypeScript and JavaScript. I have a strong background in building and maintaining software for startups and large companies.

Skills

- **Ruby**, **Node.js**, **TypeScript**, **JavaScript**, **Go**
- **Ruby on Rails**, **Next.js**
- **React**, **Tailwind CSS**
- **Postgres**, **MySQL**
- **CSS**, **HTML**
- **Unit Testing**, **Acceptance Testing**

Soft Skills

- Problem-solving skills and critical thinking.
- Communication skills.
- People and interpersonal skills.
- Self-awareness.
- Self-learning.
- Accountability.
- Time management.
- Emotional intelligence.

Achievements

- Founded and built all the software for a profitable startup.
- Had my software featured in a print technology magazine.
- My work was featured in Wired magazine.
- Part of the team that rebuilt the BBC News website from the ground up.
- Built software for use in a large factory, which is still in use today.
- Successfully managed and lead teams of developers.
- Designed, built, and maintained the software for a very well funded startup, through multiple successful funding rounds.
- Tutored teams of developers in the art of testing software.

Experience

contract   November 2021 to March 2023

Lead a team of developers to rewrite money management tools (apps) to make them more intuitive, accessible, and beautiful.

- Designed and built many money tools for the UK government.
- Presented and championed the moving of many projects out of a failing AEM (Adobe Experience Manager) system to Next.js and TypeScript.
- Designed the whole development system to allow multiple teams to build tools concurrently.
- Managed the deployment infrastructure for the team.
- Approved all code reviews from an external agency who were building tools in the same codebase.

- Stamp Duty Land Tax Calculator
- Land Transaction Tax Calculator
- Land and Buildings Transaction Tax (LBTT) calculator
- Compare Accounts
- Debt Advice Locator
- Inbest Benefits and grants checker

contract   **May 2013 to February 2015**

My first time working with Featurist, a software development agency built up of friends from ITV and BBC. We were tasked with building all the software for Shopa, an app that would give cashback to users who bought products through our website.

- Wrote the shopa.com Rails app
- Managed all the infrastructure, including extensive use of Docker, AWS, Heroku
- Wrote many microservices (mostly in Golang) that would pull data for hundreds of millions of products from popular affiliate networks and populate ElasticSearch / Postgres databases.
- Wrote an image server in Golang to handle millions of image requests and downloading and resizing them on the fly.

**contract**   **September 2012 to May 2013**

- Worked across three different teams teaching BDD to developers, using Cucumber and Ruby.
- Helped with the interviewing and hiring process.
- Wrote software to enable functional testing of Android Applications.

CSS HTML Ruby Java JavaScript Bash Android iOS Agile
Load Testing Unit Testing Acceptance Testing

contract   August 2011 to August 2012

My first contract role in the UK.

- Worked with the Responsive News team to help teach the use of BDD/TDD.
- Interviewed and hired contractors and permanent developers.
- Redesigned the BBC News site using responsive design techniques to allow the site to work on a large range of mobile phones.
- Set up an automated load testing build configuration using Tsung. This build runs a few times every night and allows us to find out if any code changes during the day have negatively impacted our performance.
- Designed a vagrant / puppet configuration to automatically provision sandbox environments for developers to run their code on.
- Trained testers in the use of Capybara so that they could automate some of their manual tests.
- Ran code dojos to help developers learn Ruby, BDD and TDD.
- Helped the team migrate from Subversion to Git.
- Wrote scripts to automatically deploy our code to test environments after a successful build.

permanent   June 2010 to August 2011

My first media company role. I made many long-term friends at ITV, and I have a lot of memories there. I joined up as a Junior .NET developer, but ended up using Ruby, PHP, and many other technologies.

- Worked on a team writing MRSS integration to allow the BBC to link to ITV videos.
- Worked with a team of ThoughtWorks developers to bring continuous delivery to our team and also improve coding standards throughout the team.
- Setup of a TeamCity CI server with a small build server farm. We also set up multiple build status monitors to show the state of the build and also the state of our various staging environments.
- Automated one-click deployment for all of our staging/production environments.
- Automated the build process for itv.com.
- Trained developers in the use of Cucumber, Capybara and Ruby
- Promoted Acceptance Testing as part of the development process.
- Worked with directly with Akamai using their HLS streaming product to enable people with iOS devices to view streaming adaptive video.
